Global Net Commerce, Inc. Introduces Oxygen3

Providing New Wireless Program Services to the Financial Industry

Irvine, California – April 23, 2015 – Global Net Commerce, Inc. (GNCI) announced the addition of a new hardware device that is capable of handling very large fleets of kiosks and ATMs. This highly flexible device is called the Oxygen3. Delivering best-in-class primary connectivity, the Oxygen 3 is also capable of serving as a back-up connection preserving business continuity during outages and times of disaster.

Mark Meierhoefer, Business Operations Manager at GNCI, tells us “It’s the advanced features of the Oxygen3 that make it truly unique. Highly secure, advanced monitoring, a backup battery - there really isn’t anything else on the market quite like it.”

The Oxygen3 supports secure private VPN communication necessary for ATM transactions, contains an internal battery allowing functionality during power outages, administers alerts pertaining to network issues and even has the capability of showing a stronger or weaker signal while disconnected from power as it is moved around a targeted wireless area.

“GNCI provides hardware and network management for some of the largest ATM fleets in North America. This communication is similar to the same technology in a smart phone”, Mark explains. “The Oxygen3 gives ATMs, or other devices, the ability to operate anywhere a provided wireless WAN is available. The connection can be to the internet or to a specific network - or anything in between,” said Mark.

GNCI is using the Oxygen3 with existing and new clients and it has been fully integrated into GNCI’s Automated Wireless Support System.

GNCI’s applications use standards-based networking and security. Industry-standard IPsec with 3DES or AES encryption is used for security over the Internet and radio network. Built-in firewall features ensure that unauthorized access attempts are logged and denied.

Global Net Commerce, Inc. (GNCI) is a leading provider of wireless solutions for the financial services and retail verticals. GNCI provides manufacturing, engineering and development of wireless applications, as well as installation, maintenance and servicing of wireless 3G/4G Broadband/Next Generation products for high-profile financial institutions’ ATMs, telemetry and affiliated member network ATMs. Our professional services and skilled technicians are focused on delivering reliable and quality support for wireless ATM programs. The executive management of GNCI possesses over 100 years of combined experience in the ATM and financial services industries. GNCI is privately owned and operated, and is based in Irvine, California. For more information on GNCI’s products and services, please refer to our website at www.gnciwireless.com.
