

WIRELESS FAST START FROM GNCI

The Customer

...An international Electronic Funds Transfer (EFT) processor with over 30 years of enterprise payments and data & decision expertise. This customer delivers flexible EFT solutions to many of the leading Fortune 1000 businesses. With a focus on mission-critical business applications, this Midwest EFT processor assists financial services companies, retailers and government organizations in growing their businesses while reducing transaction and infrastructure costs, detecting potential fraud and building long-term customer value. This EFT processor uses a delivery model that can be operated in-house, outsourced or a combination of both, allowing its clients to balance control with operational efficiency.

CASE STUDY: WIRELESS ATM CONNECTIVITY

The Challenge

...Finding ways to significantly reduce network communications costs and improve time-to-market for their ATM customers. Many customers were also seeking innovative, cost-effective ways to deploy branch or mobile ATMs.

The Solution

This customer chose GNCI's wireless ATM connectivity program to provide that competitive edge they sought in the ATM communications space. GNCI was able to address both legacy Bisynchronous and TCP/IP ATM communications, which were important requirements for their client institutions. Additionally, the program services available from GNCI provided a turn-key operation, allowing the customer to confidently market the solution to their client base.

- *High Speed Wireless Communications*
- *High Security Networking Devices*
- *Versatile, Flexible Applications*
- *Cost Effective*

The Result

This customer is now routinely delivering wireless ATMs today at a fraction of the cost of traditional leased landlines, with communication delivery reduced from 60-90 days, to less than 10 days. The GNCI ATM program provided reliable wireless telecommunications services that combined cost effectiveness, high security and real value for the customer.

Benefits

Significant cost savings versus landline

Improved time to market with speedy deployments

Versatile and flexible applications with high network availability

High security features/IPSEC/VPN client server

Easily upgradeable radio card PCMCIA / Cardbus slot for future broadband platforms
