NEWS RELEASE

Global Net Commerce, Inc. Announces Novatel Wireless 551L 4G USB Modem Support for Verizon

Providing New Wireless Program Services to the Financial Industry

Irvine, California – August 15th, 2011 – Global Net Commerce, Inc. (GNCI) announced today the release of Linux driver support for the Novatel 551L 4G USB Modem, an external 4G LTE CDMA-based radio module. This release adds to the list of 4G/LTE radio modules that are supported by the MRM X-1000 and X-3000 series wireless routers/modems. The USB 551L LTE card features a combined 4G and CDMA/Rev.A backwards network functionality. The MRM requires the USB adapter to be used for proper connectivity.

The USB 551L is available from Verizon, and uses both the 4G LTE and EVDO Rev.A networks. The USB modem has outstanding speed performance. Typical throughput test results are averaging 10 megabits per second (Mbps) downlink speed and 5 to 7 megabits per second (Mbps) uplink speed.

 "GNCI is proud to offer Linux driver support for this advanced mobile networking product in our new MRM series routers/modems," said Michael Goraleski, President and CEO. "The 551L wireless USB modem is a compact and lightweight device. The modem has a four-color status LED indicator to validate on-line connectivity. Our customers can benefit from the convenience and speed of both 4G and existing 3G EVDO Rev.A in their networking applications, plus the flexibility to incorporate USB modems into the MRM X series router platform without the added expense of purchasing a new router with an embedded modem."

"We have aggressively tested the internal advanced antenna design," said Vice President Joseph Chan. "The tri-band performance has surpassed our expectations". We are pleased to have the Verizon/Novatel 551L radio supported by our hardware platform."

GNCI's applications use standards-based networking and security. Industry-standard IPSec with 3DES or AES encryption is used for security over the Internet and radio networks. Built-in firewall features ensure unauthorized access attempts are logged and denied.

Global Net Commerce, Inc. (GNCI) is a leading provider wireless application for the financial services and retail verticals. GNCI provides manufacturing, engineering/development of wireless applications, and offers installation, maintenance and servicing of wireless 3G/4G Broadband/Next Generation products for the ATMs and telemetry of high profile financial institutions and affiliated member networks. Our professional services and skilled technicians are focused on delivering reliable and quality support for wireless ATM programs. The executive management of GNCI possesses over 100 years of combined experience in the ATM and financial services industries. GNCI is privately owned and operated, and is based in Irvine, California. For more information on GNCI's products and services, please visit our website at www.gnciwireless.com.
