Global Net Commerce, Inc. Announces Sierra Wireless Momentum 4G USB Modem Support for AT&T

Providing New Wireless Program Services to the Financial Industry

Irvine, California – May 20th, 2011 – Global Net Commerce, Inc. (GNCI) announced today the release of driver support for the Sierra Wireless Momentum 4G USB Modem, an external 4G LTE-based radio module. This is the latest radio module to be supported by the MRM X-1000 and X-3000 series wireless router/modems. The Momentum LTE card features combined 4G and 3G backwardly-compatible network functionality. The MRM requires the USB adapter to be used for proper connectivity.

The Sierra Wireless Momentum aircard 313U is known as the AT&T USB Connect Momentum 4G modem. It delivers very impressive download and upload speeds. (Downloads up to 100Mbps and uploads reaching 50 Mbps.)

“GNCI is pleased to offer support for this advanced mobile networking product in our new MRM series router/modems,” said Michael Goraleski, President and CEO. “In addition to LTE, the Momentum supports dual carrier HSPA+, earlier versions of HSPA+, and older network protocols such as UMTS, EDGE and GPRS”. The modem has a USB hinge designed for optimal durability. Our customers can benefit from the convenience and speed of both 4G and existing 3G in their networking applications and the freedom to incorporate USB modems into the MRM router without the costly expense of purchasing a new router with an embedded modem.

Joseph Chan, Vice President, adds: “We really like the performance and ease of carrier connectivity. The Momentum aircard has an easy “plug and play” installation process and does not require a CD. This radio module is very durable and reliable. It has great connectivity with the Sierra Wireless Watcher software. The robust design makes this aircard perfect for working in tight spaces.”

GNCI’s applications use standards-based networking and security. Industry-standard IPsec with 3DES or AES encryption is used for security over the internet and radio networks. Built-in firewall features ensure unauthorized access attempts are logged and denied.

Global Net Commerce, Inc. (GNCI) is a leading provider of wireless applications for the financial service and retail verticals. GNCI provides manufacturing, engineering/development of wireless applications, installation, maintenance and servicing of wireless 3G / 4G Broadband / Next Generation products for high profile institutions/clients requiring secure private VPN networks. Our professional services and skilled technicians are focused on delivering reliable service and quality support for wireless WWAN programs. The executive management of GNCI possesses over 100 years of combined experience in the ATM and financial services industries. GNCI is privately owned and operated, and is based in Irvine, California. For more information on GNCI’s products and services, please visit our website at www.gnciwireless.com.
