Global Net Commerce, Inc. Supports Sierra Wireless AirCard 595U

Providing New Wireless Program Services to the Financial Industry

Irvine, California – July 9, 2007 – Global Net Commerce, Inc. (GNCI) announced today the release of driver support for the new Sierra Wireless AirCard 595U, an external USB CDMA-based radio module. This is the latest radio module to be supported by the MSM wireless router/modem, and the first which functions from its USB port. The AirCard 595U can either be directly mounted to the MSM, or be connected with the supplied USB cable. Use of the USB cable allows for better positioning of the radio module to optimize reception.

The AirCard 595U uses the latest Qualcomm CDMA chipset to support EVDO Rev.A, delivering typical throughput of 600 to 1,400 kbps downlink speed and 500 to 800 kbps uplink speed.

“GNCI is proud to offer support for this advanced mobile networking product in our MSM router/modem,” said Michael Goraleski, President and CEO. “The AirCard 595U allows our new and existing customers to benefit from the convenience and speed of EVDO Rev.A in their networking applications and the freedom to choose USB or PCMCIA / Cardbus options for wireless connectivity.”

Wolfgang Tolkien, Senior Engineer further adds: “We have tested this radio module extensively and we are very impressed by its performance and reliability. By extending radio card support to external USB attached modules, GNCI's MSM wireless router/modem continues to be the industry leader in the number of radio modules supported.”

GNCI's applications use standards-based networking and security. Industry standard IPSEC with 3DES or AES encryption is used for security over the internet and radio network. Built-in firewall features ensure unauthorized access attempts and logged and denied.

Global Net Commerce, Inc. (GNCI) is a leading provider wireless application for the financial services and retail verticals. GNCI provides manufacturing, engineering/development of wireless applications, and offers installation, maintenance and servicing of wireless 3-G / Broadband / Next Generation products for the ATMs and telemetry of high profile financial institutions' and affiliated member networks.
