Global Net Commerce, Inc. Enhanced Remote PRL / Activation Capability

Providing New Wireless Program Services to the Financial Industry

Irvine, California – September 19, 2007 – Global Net Commerce, Inc. (GNCI) announced today that its MSM router/modem operating system now supports remote Preferred Roaming Lists (PRL) and activations for all Novatel and Sierra Wireless radio cards. This capability is available on all GNCI wireless applications. “GNCI is very pleased about this operating enhancement,” said Michael Goraleski, President and CEO. “The remote PRL and activation feature saves time and avoids costly visits to our customers’ remote wireless sites. GNCI’s MSM solution reduces the possibility of communication losses associated with carrier PRL updates.”

Wolfgang Tolkien, Senior Engineer adds “This feature really streamlines the carrier and client trouble-shooting process. It also allows carriers/customers to modify data usage plans and easily implement carrier data enhancements. Our leading-technology product is among the first to support this capability to update Preferred Roaming Lists and activate radio cards across multiple radio cards.”

GNCI’s applications use standards-based networking and security. Industry standard IPSEC with 3DES or AES encryption is used for security over the internet and radio network. Built-in firewall features ensure unauthorized access attempts and logged and denied.

Global Net Commerce, Inc. (GNCI) is a leading provider of wireless applications for the financial services and retail verticals. GNCI provides manufacturing, engineering / development of wireless applications; and offers installation, maintenance and servicing of wireless 3-G / Broadband / Next Generation products for ATMs and telemetry of high profile financial institutions and affiliated member networks.
